

# Electrical safety outdoors

Electricity is dangerous! It can give you an electric shock that badly hurts or even kills you. Be a bright spark when you are near electricity - follow these simple rules...

**Always 'look out' and 'look up' before fishing.** Keep away from all overhead lines. It's easy to mix up dangerous power lines with telephone lines.

**Be careful near broken street lights.** Exposed wires can shock you.

**Keep out of places that have this sign. It means danger of death.**

**Don't climb trees near power lines.** Electricity can jump through the air and hurt you.
